Documentation

The website that we designed is about clips from video games. We collected clips from our group and uploaded them to showcase. Along with these clips, you can access this documentation conveniently on the website, allowing you to quickly view everything you need.

The website uses Python for the server hosting, Flask to be exact. With this, and a very flexible block system we could easily format the website to our needs.

We also used Git, along with Codespaces and Live Share, allowing us to work simultaneously on the same code, it being updated as we wrote it, making work even quicker.

For now, we only have 5 videos, but we could indefinitely expand in the future, as the website is very flexible.

The videos are inside of a grid, which makes the website look clean, and organized.

```html
<div class="container">
    <div class="child">
        <video width="320" height="240" controls>
            <source src="{{ url_for('static', filename='videos/egy.mp4') }}" type="video/mp4">
        </video>
    </div>
    <div class="child">
        <video width="320" height="240" controls>
            <source src="{{ url_for('static', filename='videos/kettő.mp4') }}" type="video/mp4">
        </video>
    </div>
    <div class="child">
        <video width="320" height="240" controls>
            <source src="{{ url_for('static', filename='videos/három.mp4') }}" type="video/mp4">
        </video>
    </div>
    <div class="child">
        <video width="320" height="240" controls>
            <source src="{{ url_for('static', filename='videos/négy.mp4') }}" type="video/mp4">
        </video>
    </div>
    <div class="child">
        <video width="320" height="240" controls>
            <source src="{{ url_for('static', filename='videos/öt.mp4') }}" type="video/mp4">
        </video>
    </div>
</div>
```
